

1      **What Is Claimed Is**

2      1. A tool-holding apparatus for holding at least one tool, the  
3                 tool-holding apparatus comprising:

4                 □ a board; and

5                 □ at least one holder formed on the board, the holder comprising a  
6                         root extending from the board, a tip extending from the root for  
7                         pressing the tool, a restraint formed thereon near the tip for  
8                         restraining the tool and a concave portion defined therein near  
9                         the root for receiving the tool.

10     2. The tool-holding apparatus according to claim 1 including at least  
11                 one pair of holders for holding a tool.

12     3. The tool-holding apparatus according to claim 2 including a plurality  
13                 of holders.

14     4. The tool-holding apparatus according to claim 1 wherein the root  
15                 extending vertically from the board.

16     5. The tool-holding apparatus according to claim 4 wherein the holder  
17                 includes a substantially horizontal section extending from the root.

18     6. The tool-holding apparatus according to claim 5 wherein the holder  
19                 includes an inclined section extending from the substantially  
20                 horizontal section.

21     7. The tool-holding apparatus according to claim 6 wherein the tip  
22                 extends obliquely from the inclined section.

23     8. The tool-holding apparatus according to claim 7 wherein the restraint  
24                 is formed on the inclined section.

25     9. The tool-holding apparatus according to claim 1 wherein the restraint  
26                 includes an obtuse protrusion formed thereon.

- 1        10. The tool-holding apparatus according to claim 1 wherein the concave
- 2                  area includes a first facet and a second facet extending from the first
- 3                  facet.
- 4        11. The tool-holding apparatus according to claim 1 wherein the tip is
- 5                  separated from the concave portion by a gap for receiving the
- 6                  spanner.
- 7        12. The tool-holding apparatus according to claim 1 including an ear
- 8                  extending from the board for hanging the tool-holding apparatus on
- 9                  the wall.
